

Botox, Daxxify & Xeomin

Service Knowledge Document

SECTION: OVERVIEW — What It Is

Botox, Daxxify, and Xeomin are neurotoxin injectables (also called neuromodulators) that temporarily relax facial muscles to smooth wrinkles and prevent new lines from forming.

How They Work

- Block signals from nerves to muscles
- Relaxed muscles = smoother skin surface
- Results are temporary and require maintenance

All Three Products

- FDA-approved for cosmetic use
 - Administered by skilled, board-certified providers
 - Create natural-looking results when done properly
-

SECTION: PRODUCT DIFFERENCES

Botox — \$16/unit

- Most well-known brand
- Lasts 3–4 months on average
- Proven track record with decades of use

Daxxify — \$12/unit

- Newer formulation
- May last longer (up to 6 months for some patients)
- Peptide-based stabilizer (different from Botox)

Xeomin — \$12/unit

- “Naked” neurotoxin without accessory proteins
- May reduce risk of antibody resistance
- Similar duration to Botox (3–4 months)

Which is right for you?

Our provider will recommend the best option based on your goals, medical history, and desired longevity during your free consultation.

SECTION: CANDIDATES — Who It’s For

Ideal Candidates

- Adults looking to reduce forehead lines, frown lines (11s), or crow’s feet
- People wanting to prevent wrinkles from deepening
- Those seeking a non-surgical, minimal-downtime option
- Patients wanting natural-looking, subtle results

Common Treatment Areas

- Forehead lines (horizontal wrinkles)
- Frown lines between eyebrows (11s)

- Crow's feet (around eyes)
 - Bunny lines (on nose)
 - Lip flip (subtle upper lip enhancement)
 - Chin dimpling (orange peel texture)
 - Neck bands (platysmal bands)
-

SECTION: CONTRAINDICATIONS — Who Should NOT Get It

Avoid Treatment If You:

- Are pregnant or breastfeeding
- Have a neuromuscular disorder (myasthenia gravis, ALS, etc.)
- Are allergic to any botulinum toxin ingredients
- Have an active infection at the injection site
- Are taking certain medications (discuss with provider)

Medications That May Interact

- Blood thinners (aspirin, warfarin, etc.) — increase bruising risk
- Certain antibiotics (aminoglycosides)
- Muscle relaxants

Important: Always discuss your full medical history and medications during your free consultation.

SECTION: SESSION DETAILS — Typical Appointment Length

Total Time: 15–30 minutes

- Consultation/assessment (first visit): 5–10 minutes
- Preparation and marking: 5 minutes
- Injections: 5–10 minutes
- Post-treatment instructions: 5 minutes

Most patients can come during a lunch break and return to work immediately.

SECTION: DOWNTIME & RESULTS TIMELINE

Typical Downtime

Minimal to none.

Immediately After

- Small bumps at injection sites (resolve in 20–30 minutes)
- Possible redness (resolves within hours)
- Very mild tenderness

First 24–48 Hours

- Slight bruising possible (rare, easily covered with makeup)
- Mild headache (uncommon, usually resolves quickly)
- Return to normal activities: Immediately
- Return to exercise: Wait 24 hours

Results Timeline

- Onset: 3–5 days
 - Full results: 10–14 days
 - Duration: 3–6 months (varies by product and individual)
-

SECTION: RESULTS — What People Often Notice

Short-Term Results (1–2 Weeks)

- Smoother forehead and reduced lines
- Softer appearance around eyes
- Less prominent frown lines
- Refreshed, rested look

Long-Term Benefits

- Prevention of deeper wrinkle formation
- More relaxed facial expressions
- Natural movement maintained (no “frozen” look when done properly)

What Neurotoxins Do NOT Do

- Fill in deep, static wrinkles (fillers are used for this)
 - Provide immediate results
 - Last forever
-

SECTION: AFTERCARE — Post-Treatment Guidelines

First 4 Hours

- Stay upright (no lying down flat)
- Avoid touching or rubbing treated areas
- No makeup on injection sites (if possible)

First 24 Hours

- No strenuous exercise or heavy lifting
- No excessive heat (sauna, hot yoga, tanning beds)
- Avoid alcohol (increases bruising risk)
- No facials, massages, or facial treatments

First Few Days

- Sleep on your back if possible
- Avoid blood-thinning medications (if medically safe)
- Use gentle skincare products

To Maximize Results

- Gently move treated muscles in the first few hours (frown, raise eyebrows)
- Stay hydrated
- Follow all provider instructions

SECTION: PRICING STRUCTURE

Per-Unit Pricing

- Botox: \$16/unit
- Daxxify: \$12/unit
- Xeomin: \$12/unit

Typical Units Needed by Area

(Varies by individual)

- Forehead: 10–20 units
- Frown lines (11s): 15–25 units
- Crow's feet: 10–15 units per side
- Full upper face: 40–60 units

Example Treatment Costs

- Forehead only (Botox): \$160–\$320
- Frown lines (Daxxify): \$180–\$300
- Full upper face (Xeomin): \$480–\$720

Exact pricing is determined during your free consultation based on muscle strength and goals. Package deals available — ask about multi-area discounts or membership pricing.

SECTION: FREQUENTLY ASKED QUESTIONS (FAQs)

Will I look frozen or unnatural?

No. Our skilled injectors aim for natural-looking results. You'll still have facial expression and movement.

Does it hurt?

Most people describe it as a quick pinch. Discomfort is minimal.

How long does it last?

- Botox and Xeomin: 3–4 months
- Daxxify: 4–6 months for some patients

What if I don't like the results?

Results are temporary and will gradually wear off. Discuss concerns with your provider.

Can I get Botox if I'm breastfeeding?

We recommend avoiding neurotoxin treatments during pregnancy and breastfeeding.

When will I see results?

Initial smoothing in 3–5 days; full results in 10–14 days.

How often do I need treatments?

Most clients return every 3–4 months.

What's the difference between Botox and fillers?

Botox relaxes muscles; fillers add volume.

Is there anyone who shouldn't get Botox?

Yes. Pregnant/breastfeeding individuals, people with certain neuromuscular disorders, or ingredient allergies.
