

WEEKEND 1 — Foundation & scope (2–4 hrs per day)

Saturday — Define what the bot IS and IS NOT

Deliverable: 1-page scope doc

Do this in Google Docs or Notion.

Sections to write:

1. Purpose

“This chatbot educates, guides, and prepares clients. It does NOT diagnose.”

2. Allowed topics:

- Service explanations
- Prep & aftercare
- Policies
- Pricing ranges / “starting at”
- Booking guidance

3. Not allowed:

- Medical diagnosis
- Guarantees
- Emergency advice

4. Escalation triggers:

- Pregnancy
- Severe pain, infection, reactions

- Medications like isotretinoin, blood thinners

Sunday — Map the user experience (no tech yet)

Deliverable: Chat flow outline

Create 2 modes:

Mode 1 — Guided Concierge

- “Not sure what I need”
- “I want to book”
- “Pricing & downtime”
- “Prep & aftercare”

Mode 2 — Ask anything

- Free text
- Suggested questions

Write **sample conversations** like:

- “I have an event in 2 weeks, what can I do?”
- “What’s downtime for microneedling?”
- “Is laser safe for darker skin?”

This becomes your design blueprint.

WEEKEND 2 — Build the knowledge base (MOST IMPORTANT)

Saturday — Service content

Deliverable: Structured service docs

Create **1 doc per service** (copy-paste template below):

Service Template

- What it is
- Who it's for
- Who should NOT get it
- Typical session length
- Typical downtime (ranges only)
- What results people often notice
- Aftercare basics
- Pricing structure (starting at / packages)
- FAQs

👉 Start with **top 5 revenue services only**

Sunday — Policies & safety docs

Deliverable: Policy + safety files

Create:

- **Cancellation / no-show policy**

●Deposits

●Prep instructions (general)

●Aftercare (general)

- Safety escalation rules (internal use)

These docs will feed your RAG system later.

WEEKEND 3 — Choose tech & set up retrieval

Saturday — Architecture choice (keep it simple)

Deliverable: Final tech decision

Recommended stack for MVP:

- LLM with **File Search / vector store**
- Website chat widget (basic)
- No custom ML yet

Decide:

- Where docs will live (PDFs / markdown)
- How often you'll update them (monthly)

Sunday — Upload & test retrieval

Deliverable: Working RAG knowledge base

Steps:

1. Upload all docs to the vector store
2. Test basic questions:
 - “What’s downtime for X?”
 - “What’s your cancellation policy?”
3. Fix unclear wording in docs (this matters more than prompts)

If answers are bad → fix the document, not the model.

WEEKEND 4 — Guided concierge logic

Saturday — Question flow design

Deliverable: Concierge decision tree

Example questions:

1. Main concern (skin, body, hair, weight, wellness)
2. Timeline (event date or none)
3. Downtime tolerance (none / mild / flexible)
4. Budget range
5. First-time or returning client

Map:

- Answer → suggested services (1–3 max)
-

Sunday — Implement concierge responses

Deliverable: Guided chat works end-to-end

Rules:

- Always include disclaimer
 - Always end with next step:
 - “Would you like to book a consult?”
 - “Want me to text/email this summary?”
-

WEEKEND 5 — Guardrails & safety

Saturday — Medical & claims guardrails

Deliverable: Safety behavior rules

Implement:

- If pregnancy → safe deflection + consult
 - If adverse symptoms → urgent guidance + human
 - Block absolute claims (“permanent”, “no risk”)
-

Sunday — Human handoff & lead capture

Deliverable: Conversion-ready bot

Add:

- “Talk to a human” button
- Lead form (name, phone, service interest)
- Email or Slack alert to staff

This is where the bot starts **making money**.

WEEKEND 6 — Testing like a real client

Saturday — Stress test

Deliverable: Test results list

Test:

- Confusing questions
- Typos
- Pushy medical questions
- Price sensitivity

Log:

- Wrong answers
 - Unsafe phrasing
 - Confusing replies
-

Sunday — Polish & launch

Deliverable: Live chatbot on site

Final touches:

- Friendly welcome message
- Clear disclaimer
- Suggested prompts
- Branding tone = Harmony

Launch quietly.

WEEKEND 7–8 (optional) — Improvements

Only after it's live:

- Bilingual (EN/ES)
- Analytics dashboard
- FAQ auto-suggestions
- Booking system integration
